The 333 ICLEAN ULTRA model was developed as an evolution of the 350 ICLEAN model. The advantages in terms of suction performance are obvious, but above all the percentage of filtration of the sucked material is absolute, representing further safety for operators thanks to the installation of 3 HEPA D.O.P. secondary filters. The renewal of the design with the installation of the motors in the lower rear part allowed the lowering of the machine, facilitating its transport. The center of gravity in the lower part makes the machine stable when moving. The vacuum cleaner is able to intervene autonomously to restore the original filtering capacity.
